***Election/Restrictions***

1. Applicant's election without traverse of species defined by Formula III in the reply filed on April 10, 2008 is acknowledged. Currently, claims 17-19, 21-24, and 29-33 read on the elected species rather than claims 17, 19-21, 22-24, and 29-33 as cited in applicants' response.

***Claim Rejections - 35 USC § 112***

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 33 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The molecular weight (Mw) limitation is indefinite since it not clear whether the molecular weight is weight average or number average molecular weight.

***Claim Rejections - 35 USC § 103***

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 17, 19-21, 22-24 and 29-33 rejected under 35 U.S.C. 103(a) as being unpatentable over Sacchetti et al. (US 5,698,487) in view of Wu et al. (US 6,555,494) and Sangokoya et al. (US 5,565,395).

The instant claims are directed to a catalyst composition and an olefin polymerization process thereof, wherein the catalyst composition comprises a support of an magnesium chloride and alkyl aluminum adduct of formula (I) and a cyclopentadienyl containing chromium complex of formula (III) (the elected species).

Sacchetti discloses a support metallocene catalyst, wherein the support is prepared by treating spherical  $\text{MgCl}_2 \cdot 3\text{ETOH}$  with triisobutylaluminum (Abstract, Examples 8, 10 and 11). Sacchetti's teaching meet all of the limitations of the instant claims except the chromium complex of formula (III). However, chromium metallocene complexes are well known in the art. For example, (tert-butylamido)dimethyl-(tetramethyl- $\eta^5$ -cyclopentadienyl)silane chromium dimethyl is disclosed in lines 64-65 of col. 13 in Wu and (tert-butylamido)dimethyl-(tetramethyl- $\eta^5$ -cyclopentadienyl)silane chromium dichloride is disclosed in lines 8-9 of col. 4 of Sangokoya.

Thus, it would have been obvious to a skilled artisan at the time the invention was made to support Sangokoya's chromium metallocene complex to Sacchetti's  $\text{MgCl}_2$  support to provide an aluminoxane free chromium catalyst composition with good morphology and in the absence of any showing criticality and unexpected results.
